Hi All,

This is a follow up to last Tuesday's meeting. I have attached an excel file with two worksheets. One ("submitted previously") is a start one getting our agencies respective submitted quantifiable objectives for the San Joaquin River flows in one place. I've copied DFG's summarized objectives from the State Board's Flow Criteria Report Appendix and then left spaces for USFWS and NMFS. I maybe able to get the others out of the appendix in the near future, but didn't get that far yet. The second worksheet ("new format") has a blank table that maybe a good way for us to put together or thoughts. I would like to get feedback on this to see if we can come up with something.

Next, I have attached a new draft of the framework for our Biological Goals and Objectives. This incorporates Jeffrey's notes and my scribbles, but there were lots of ideas that were tossed around that could still be included. Please take a look at this a send along your comments. The breakout work group

will compile and get this back out for our next meeting.

Finally, here are some important documents (links):
